

Jegadeesh Ramamoorthy

QE Delivery Manager | Test CoE | Cross-Functional & Delivery Leadership | QA Strategy & Automation
970-999-2701 | r_jeg@yahoo.com | <https://www.linkedin.com/in/jegramamoorthy/>

SUMMARY

Test Engineering and Test Delivery leader with 15+ years of experience delivering enterprise software, SaaS, and regulated medical device programs across global teams. Proven in leading cross-functional organizations, building Test Center of Excellence, and driving high-quality outcomes for complex platforms. Combines strong technical depth in cloud-native & distributed systems and enterprise integrations with a focus on predictable delivery, risk mitigation, and operational efficiency. Experienced in scaling teams, modernizing test practices, and partnering with engineering and product leaders to deliver reliable releases in Agile, SaFe, and DevOps environments.

CORE COMPETENCIES

- QA Delivery Leadership & Building Test CoE Ground-up
- Delivery Strategy, Test Planning & Quality Governance
- Cross-Functional & Stakeholder Management
- Roadmap Planning & Release Governance
- Regulated Environment - Compliance & Documentation
- Automation Strategy & Framework Adoption
- Agile / Scrum / SAFe Delivery Environment
- Microservices, API & Cloud Platform Testing
- CI/CD Integration & DevOps Collaboration
- Defect Management, Root Cause Analysis & Risk Evaluation (FMEA)
- Strong end-to-end Systems Engineering Experience
- Performance, Reliability & Resilience Engineering
- Adaptable to Changing Needs & Priorities
- Agile to handle multiple projects and initiatives
- Team Scaling, Mentoring & Talent Development

PROFESSIONAL EXPERIENCE

Senior QA & Regulatory Program Lead

Semler Scientific, Inc – Remote (Raleigh, NC) | 2021 – 2026

- Directed QA strategy covering functional, system integration and UAT, automation and regulatory-compliant testing across the product lifecycle
- Streamlined ad-hoc testing silos, processes and established tools and processes, successfully navigated the engineering team, ensuring processes aligned with stringent regulatory requirements
- Owned end-to-end QE planning including test strategy, release readiness reviews, and quality gates.
- Oversaw automation development, API validation, integration into CI/CD pipelines and performance validation to ensure scalable platform releases.
- Led end-to-end clinical work-flows & data validations, integrations involving data-heavy EHR systems, ensured test & staging environments mirrored production datasets to ensure representative testing
- Partnered with Regulatory Affairs (RA) in risk evaluation, ensuring regulatory compliance, DHF documentation, audit readiness and CAPA resolution activities
- Led defect triage, root cause analysis, and risk mitigation programs improving release stability and audit readiness
- Participated in design reviews, backlog grooming and sprint planning to strengthen “definition of done” criteria
- Piloted AI-enabled tools in test and automation development process
- Mentored engineering teams in risk-based planning, process and execution discipline.
- Improved release predictability and production response processes through structured governance.

Senior QA Lead - SaaS Data Analytics Platform

Apptio Inc – Boulder, CO | Mar 2017 – Aug 2020

- Led QE across multiple Agile teams delivering a large-scale Technology Business Management SaaS data platform, supporting IT Budget planning, forecasting and actuals analytics for global IT businesses
- Implemented automation and CI/CD integration improving release velocity and reducing production defects by 30%.
- Established structured quality metrics and dashboards including automation coverage, test execution efficiency, and defect leakage and presented to senior product leaders and applied to release decision making
- Managed end-to-end system, integration validations and enhanced performance testing as data volume increased
- Introduced risk-based testing approaches improving early defect detection and release quality
- Collaborated with DevOps teams to embed automated testing into pipelines and enforce quality gates across releases.
- Acted as QA interface for product management, engineering, partner and customer success teams.

Test Architect – Enterprise Platform Reliability

Hewlett-Packard Enterprise – Fort Collins, CO | Dec 2013 – Oct 2015

- Led a customer-focused test engineering team (7–10 senior engineers) delivering enterprise data back-up platform releases.
- Defined cohesive validation strategies aligned with product roadmap, architecture, and release milestones.
- Collaborated with global engineering and system architecture teams to ensure end-to-end delivery quality.
- Implemented risk-based (FMEA) validation strategies to prioritize high-impact system components early in the release, ensuring system reliability and failure recovery and protecting delivery commitments.
- Directed fault-injection and resilience programs improving system recovery and enterprise reliability.
- Partnered with field and support teams to drive root cause analysis and incorporate learnings into test strategy.

Test CoE Delivery Manager – Global Technology Programs

Hewlett-Packard Enterprise – Bristol, UK | Oct 2010 – Nov 2013

- Built and led a global Test Center of Excellence supporting enterprise storage software programs.
- Managed global onshore-offshore QE teams of 25+ engineers including test leads, automation engineers, functional, system integration, performance & reliability specialists.
- Owned delivery planning, staffing & test infrastructure forecasts, resource management, and execution governance.
- Implemented standardized QE processes, automation frameworks, and delivery metrics (KPI) dashboards.
- Drove process discipline, influenced stakeholders and gained buy-in for implementation of QA toolset, test infrastructure optimization
- Delivered 10+ major enterprise releases while improving delivery transparency and achieving 20–30% cost efficiency.
- Played a key leadership role in SaFe Agile transformation initiatives across global engineering organizations.

Senior Systems & Development Engineer – Enterprise Infrastructure Platforms

Hewlett-Packard Enterprise – Bangalore, India | Nov 1997 – Sep 2010

- Led automation and qualification for HP-UX enterprise server platforms.
- Contributed to mission-critical system releases and enterprise product evolution.
- Built automation frameworks, reducing test cycle time by 60%.
- Collaborated with pre-sales and field engineering for solution demonstrations and enterprise customer support.

TECHNICAL FOUNDATION

- **Platforms & Environments:** AWS, Linux, Windows, Cloud-native architectures
- **Technologies:** REST APIs, Microservices, CI/CD DevOps
- **Data & Integration:** SQL, Finance & Budget Planning datasets, Healthcare data integrations (HL7, FHIR, EHR)
- **Languages:** Python, Java, Bash, SQL
- **Automation & Tools:** Jira, Rally, TestRail, HP ALM/QC, Git, Jenkins, Selenium, Playwright, TestNG, Postman, Splunk, JMeter
- **Regulatory Environment:** FDA & ISO 13485(QMS), IEC 62304(Medical Device SDLC), ISO 14971(Risk Management)
- **AI Foundational Knowledge:** LLMs, MCP, RAG, Agentic Systems & AI-enabled QA processes

CERTIFICATIONS

- Certified Scrum Product Owner (CSPO) – Scrum Alliance
- ISEB/ISTQB Software Testing – British Computer Society
